PROFESSIONAL SUMMARY

Senior mobile engineer with 7 years building React Native and Android applications, most of it in fintech. Spent nearly two years on NPCI BHIM — India's national UPI payment app — owning code quality, app size and stability. Currently working full-stack at Jiraaf across Flutter, Next.js and Node.js. Comfortable across the mobile surface: native modules, the React Native bridge, state management, API integration, and performance on the low-end Android devices most Indian users carry.

WORK EXPERIENCE

Jiraaf February 2026 – Present

Senior Software Engineer

- Delivered new product features spanning front-end (Next.js), backend (Node.js) and mobile (Flutter), shipping across web and mobile on a regular release cadence
- Improved app performance by profiling render behaviour and refactoring bottleneck screens, with a focus on low-end Android devices
- Reduced defects reaching production by tightening type safety and expanding test coverage across critical user flows
- Ramped into Flutter from a React Native background and became productive on production features quickly

National Payments Corporation of India (BHIM) May 2024 – February 2026

Senior Software Engineer · Goregaon, Mumbai

- Owned code quality and app performance for BHIM, NPCI's consumer app on India's national payment rails, across React Native screens and native Android modules
- Reduced app size by 35% by replacing raster assets with vector drawables, stripping dead native libraries, and replacing third-party dependencies with hand-written implementations
- Cut crash rate by 15% and ANR rate by 8% by diagnosing failures in the native bridge layer and fixing root causes rather than symptoms
- Improved transaction reliability across UPI flows by handling failure states, retries and edge cases, reducing failed-payment support escalations
- Raised engineering standards through refactoring and code review across the mobile codebase

Daynil Group Solutions Pvt. Ltd. July 2019 – April 2024

Mobile Application Developer · Dombivli, Mumbai

- Delivered 12+ client applications across React Native and Android, owning development end to end from requirements through release — four published to the Play Store, the remainder client-owned or white-label
- Cut setup time on new client projects by building a reusable component library and project scaffold, adopted across multiple engagements
- Mentored 5 junior engineers and established code review standards, progressing from developer to senior contributor over five years

SKILLS

Mobile: React Native, Flutter, Android (Kotlin, Java), Native Modules, MVVM, SDK Integration, App Performance Optimisation, Play Store Deployment

Languages: TypeScript, JavaScript, Dart, Kotlin, Java

Web & Backend: ReactJS, Next.js, Node.js, REST APIs, GraphQL

Tools & Practice: Redux, Firebase, Firebase Crashlytics, Jest, Git, Android Studio, Xcode, VS Code, Agile/Scrum

SELECTED PROJECTS

BHIM — Bharat Interface for Money (React Native, Android, Kotlin, Java)
NPCI's UPI payment app. Owned app size, crash/ANR reduction and code quality across the React Native and native Android layers.

Jiraaf — SEBI-Regulated Bond Platform (Flutter, Next.js, Node.js)
Online Bond Platform Provider giving retail investors access to corporate bonds, government securities and high-yield fixed deposits. Delivered features across web, backend and mobile.

MyCityA2Z (React Native, Android)
Grocery commerce and advertisement management application.

Fee Manager (Android)
Automated fee generation for educational institutions, replacing a manual administrative process.

My Cashbook (Android)
Account creation and transaction tracking for small business owners.

EDUCATION

Shah and Anchor Kutchhi Engineering College — B.E. Electronics, Chembur | 2015 – 2018

Shah and Anchor Kutchhi Polytechnic — Diploma in Electronics, Chembur | 2011 – 2015
